

PFAS - TOXIC AND COMING TO A BEACH NEAR YOU!

Scientists have found PFAS huge amounts in sea spray:

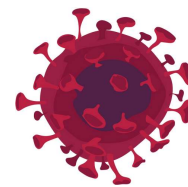

It's been found everywhere – even in Polar Bears in the Arctic and Penguins Eggs in Antarctica!

NO SURFING

Scientists say it's so bad in Europe it's not safe for marine recreation or coastal agriculture.

PFAS is a group of over 4000 chemicals used in a wide range of household items including clothing, sunscreen and cosmetics. They're called forever chemicals because they don't break down and so end up in our environment.

PFAS causes cancer, is a hormone disruptor, raises cholesterol level and is implicated in other serious medical conditions including kidney disease.

It ends up in our oceans

Australia's 192 Coastal Outfalls nod.org.au

In response the European Union will upgrade all outfalls to Zero Pollution.

Zero Pollution - The Ocean Solution

Australia has no such plans to upgrade its outfalls!

Zero Pollution

- No PFAS (Forever Chemicals)
- No Microplastics
- No other Micropollutants
- No Nutrients
- No Pathogens

Clean Ocean Foundation is the community voice working to make Zero Pollution from Australia's outfalls a reality.
